

Color Design System

Canonical color tokens for Fuel 2.0. Source of truth: `src/styles/fuel-tokens.css` , `src/app/PatriotPayJourney.css` , `src/app/statusSystem.ts` . Themes: **light** and **dark** via `html[data-theme]` .

1. Brand & status core (theme-independent)

Brand accent / Good

`#12B886`

`--fuel-accent`

`--status-good`

Watch / Attention

`#F5A623`

`--status-watch`

Critical / Bad

`#E05C5C`

`--status-bad`

Fuel uses exactly **three** semantic status colors. Do not add alternate greens, ambers, or reds for the same meaning.

11. Accessibility notes

- Never convey status by color alone — pair badges/dots with text labels.
- #12B886 and #F5A623 on white: use ≥12px bold for large text; pair with labels for body text.
- #E05C5C on white meets 4.5:1 for normal text.
- Focus rings: use primary / accent tokens, not status colors.
- Modal scrims: sufficient contrast; dialog content on --panel .
